

ABSTRACT OF THE DISCLOSURE

A method and system for transmitting data over a network are described. In one embodiment, the system comprises a cradle to transmit data to a network server and an electronic device coupled to the cradle. The electronic device includes a sensor to trigger a data connection between the electronic device and the cradle. The electronic device also includes a transmitter to download the data to the cradle.

1. A method for transmitting data over a network, comprising:
a. providing a cradle to transmit data to a network server;
b. providing an electronic device coupled to the cradle;
c. the electronic device including a sensor to trigger a data connection between the electronic device and the cradle;
d. the electronic device also including a transmitter to download the data to the cradle.
